

Came and
visit us at
Wast Water.

How was it formed?

Wast Water was
scoped out by
grinding, flowing ice at
the end of the
last ice age.

It's located
in the Lake
District National
Park and it is
the ~~deepest~~ ^{deepest} lake
in England.

Just did you
know. Just beyond
the ^{50m} lake there is
a gnome garden
no one knows where
they came from.

Facts

- Wast Water is the deepest lake in England.
- Wast Water is 200 feet deep.
- Wast Water is three miles long by half a mile wide.

Wast Water

Waters are extremely clear and no fish live in it.
